Our Approach to Investing in Asia and Emerging Markets

Active management

We believe many of the region's widely used equity indices are backward looking and are not representative of the industries and companies that will be successful in the future. With respect to the region's debt indices, we believe they are representative of the most indebted countries as opposed to the most creditworthy.

Long-term focus

We believe a long-term approach is the most effective way to capitalize on Asia's evolution.

Matthews Asia has been investing in Asia and emerging markets since 1991 and we draw on our experience to identify investment opportunities that stand to benefit from the growth and development of markets throughout the region.

Bottom-up research

We employ a fundamental, bottom-up investment process. For equities, we seek to identify companies with sustainable long-term growth prospects, strong business models, quality management teams and reasonable valuations.

Defining Asia's investment strategies

We strive to provide investors a range of Asia and emerging markets strategies across the risk-reward spectrum and launch new strategies when there are compelling investment opportunities in the region.

Jeremy Sutch, CFA Portfolio Manager

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Matthews Emerging Markets Equity Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in emerging market countries. Emerging market countries generally include every country in the world except the United States, Australia, Canada, Hong Kong, Israel, Japan, New Zealand, Singapore and most of the countries in Western Europe.

Risks

All Investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange rate fluctuations, a high level of volatility and limited regulation. Additionally, investing in emerging and frontier securities involves greater risks, as these countries are substantially smaller, less liquid and more volatile than securities markets in more developed markets. These and other risks associated with investing in the Fund can be found in the prospectus.

PERFORMANCE AS OF JUNE 30, 2026

	Average Annual Total Returns							Since Inception
	3 Months	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception

Investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors. Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

Matthews Asia is the brand for Matthews International Capital Management, LLC and its direct and indirect subsidiaries. The information contained herein has been derived from sources believed to be reliable and accurate at the time of compilation, but no representation or warranty (express or implied) is made as to the accuracy or completeness of any of this information. Matthews Asia and its affiliates do not accept any liability for losses either direct or consequential caused by the use of this information. Matthews International Capital Management, LLC is the advisor to the Matthews Asia Funds. Matthews Asia Funds are distributed in the United States by Foreside Funds Distributors LLC. Matthews Asia Funds are distributed in Latin America by Picton S.A.

³ Holdings may combine more than one security from the same issuer and related depositary receipts.

⁴ Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding. Percentage values may be derived from different data sources and may not be consistent with other Fund literature.

⁵ Equity market cap of issuer.

⁶ Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.

⁷ The P/E Ratio is the share price of a stock as of the report date, divided by the forecasted earnings per share for a 12-month period (FY1) or a 24-month period (FY2). For the Fund, this is the weighted harmonic average estimated P/E ratio of all the underlying stocks in the Fund, excluding negative earners. There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.

⁸ A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.

⁹ Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.

¹⁰ Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.

¹¹ Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Before July 29, 2022, the Fund was managed with a different investment strategy and may have achieved different performance results under its current investment strategy from the performance shown for periods before that date.

Matthews Emerging Markets Sustainable Future Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies of any market capitalization located in emerging market countries that satisfy one or more of the Fund's environmental, social and governance ("ESG") standards. Emerging market countries generally include every country in the world except the United States, Australia, Canada, Hong Kong, Israel, Japan, New Zealand, Singapore and most of the countries in Western Europe. Certain emerging market countries may also be classified as "frontier" market countries, which are a subset of emerging market countries with newer or even less developed economies and markets, such as Sri Lanka and Vietnam.

Risks

All investments involve risks, including possible loss of principal. Matthews Emerging Markets Sustainable Future Fund's consideration of ESG factors in making its investment decisions may impact the Fund's relative investment performance positively or negatively. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. These and other risks associated with investing in the Fund can be found in the prospectus.

PERFORMANCE AS OF JUNE 30, 2026

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Before April 30, 2021 the Fund was managed with a materially different investment strategy and may have achieved materially different performance results under its current investment strategy from the performance shown for periods before that date.

Matthews Emerging Markets Small Companies Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of Small Companies located in emerging market countries. Emerging market countries generally include every country in the world except the United States, Australia, Canada, Hong Kong, Israel, Japan, New Zealand, Singapore and most of the countries in Western Europe. The Fund defines Small Companies as companies with market capitalization no higher than the greater of \$5 billion or the market capitalization of the largest company included in the Fund's primary benchmark, the MSCI Emerging Markets Small Cap Index.

Risks

All Investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange rate fluctuations, a high level of volatility and limited regulation. Additionally, investing in emerging and frontier securities involves greater risks, as these countries are substantially smaller, less liquid and more volatile than securities markets in more developed markets. Investing in small- and mid-size companies is more risky and volatile than investing in large companies as they may be more volatile and less liquid than larger companies. These and other risks associated with investing in the Fund can be found in the prospectus.

Investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors. Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

Matthews Asia is the brand for Matthews International Capital Management, LLC and its direct and indirect subsidiaries. The information contained herein has been derived from sources believed to be reliable and accurate at the time of compilation, but no representation or warranty (express or implied) is made as to the accuracy or completeness of any of this information. Matthews Asia and its affiliates do not accept any liability for losses either direct or consequential caused by the use of this information. Matthews International Capital Management, LLC is the advisor to the Matthews Asia Funds. Matthews Asia Funds are distributed in the United States by Foreside Funds Distributors LLC. Matthews Asia Funds are distributed in Latin America by Picton S.A.

- Holdings may combine more than one security from the same issuer and related depositary receipts.
- Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding. Percentage values may be derived from different data sources and may not be consistent with other Fund literature.
- Equity market cap of issuer. The Portfolio's market cap exposure breakdown presented is used for comparison purposes and the definition of the capitalization breakdown is from MSCI. The Fund defines Small Companies as companies with market capitalization no higher than the greater of US\$5 billion or the market capitalization of the largest company included in the Fund's primary benchmark, the MSCI Emerging Markets Small Cap Index.
- Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.
- The P/E Ratio is the share price of a stock as of the report date, divided by the forecasted earnings per share for a 12-month period (FY1) or a 24-month period (FY2). For the Fund, this is the weighted harmonic average estimated P/E ratio of all the underlying stocks in the Fund, excluding negative earners. There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.
- A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.
- Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.
- Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.
- Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.

Portfolio Manager Portfolio Manager

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Matthews Asia Growth Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in Asia. Asia consists of all countries and markets in Asia, and includes developed, emerging and frontier countries and markets in the Asian region. The Fund may also invest in the convertible securities, of any duration or quality, of Asian companies.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. These and other risks associated with investing in the Fund can be found in the prospectus.

Investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors. Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

Matthews Asia is the brand for Matthews International Capital Management, LLC and its direct and indirect subsidiaries. The information contained herein has been derived from sources believed to be reliable and accurate at the time of compilation, but no representation or warranty (express or implied) is made as to the accuracy or completeness of any of this information. Matthews Asia and its affiliates do not accept any liability for losses either direct or consequential caused by the use of this information. Matthews International Capital Management, LLC is the advisor to the Matthews Asia Funds. Matthews Asia Funds are distributed in the United States by Foreside Funds Distributors LLC. Matthews Asia Funds are distributed in Latin America by Picton S.A.

³ Holdings may combine more than one security from the same issuer and related depository receipts.

⁴ Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding. Percentage values may be derived from different data sources and may not be consistent with other Fund literature.

⁵ Equity market cap of issuer.

⁶ Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.

⁷ The P/E Ratio is the share price of a stock as of the report date, divided by the forecasted earnings per share for a 12-month period (FY1) or a 24-month period (FY2). For the Fund, this is the weighted harmonic average estimated P/E ratio of all the underlying stocks in the Fund, excluding negative earners. There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.

⁸ A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.

⁹ Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.

¹⁰ Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.

¹¹ Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasiasia.com. Please read the prospectus carefully before investing.

Matthews Asia Innovators Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in Asia that Matthews believes are innovators in their products, services, processes, business models, management, use of technology, or approach to creating, expanding or servicing their markets. Asia consists of all countries and markets in Asia, including developed, emerging, and frontier countries and markets in the Asian region.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. The Fund's value may be affected by changes in the science and technology-related industries. These and other risks associated with investing in the Fund can be found in the prospectus.

Matthews China Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in China. China includes its administrative and other districts, such as Hong Kong.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. In addition, single-country and sector funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic region. Investing in Chinese securities involve risks. Heightened risks related to the regulatory environment and the potential actions by the Chinese government could negatively impact performance. These and other risks associated with investing in the Fund can be found in the prospectus.

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies in China that Matthews believes are innovators in their products, services, processes, business models, management, use of technology, or approach to creating, expanding or servicing their markets. China includes its administrative and other districts, such as Hong Kong.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. In addition, single-country and sector funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic region. Investing in small- and mid-size companies is more risky and volatile than investing in large companies as they may be more volatile and less liquid than larger companies. Investing in Chinese securities involve risks. Heightened risks related to the regulatory environment and the potential actions by the Chinese government could negatively impact performance. These and other risks associated with investing in the Fund can be found in the prospectus.

PERFORMANCE AS OF JUNE 30, 2026

	Average Annual Total Returns						
	3 Months	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception

Effective April 30, 2026, in connection with changes to the Fund's name from China Small Companies Fund to China Innovators Fund and principal investment strategies, the primary benchmark was changed from the MSCI China Small Cap Index to the MSCI China All Shares Index.

GROWTH OF A HYPOTHETICAL \$10,000 INVESTMENT SINCE INCEPTION — INVESTOR

The performance data and graph do not reflect the deduction of taxes that a shareholder would pay on dividends, capital gain distributions or redemption of fund shares. Values are in US\$. Source: BNY Mellon Investment Servicing (US) Inc.

- Matthews has contractually agreed to waive fees and reimburse expenses to limit the Total Annual Fund Operating Expenses until April 30, 2027. Please see the Fund's prospectus for additional details.
- The MSCI China All Shares Index captures large and mid-cap representation across China A shares, B shares, H shares, Red chips (issued by entities owned by national or local governments in China), P chips (issued by companies controlled by individuals in China and deriving substantial revenues in China), and foreign listings (e.g. ADRs). The index aims to reflect the opportunity set of China share classes listed in Hong Kong, Shanghai, Shenzhen and outside of China. Index is for comparative purposes only and it is not possible to invest directly in an index.

Performance assumes reinvestment of all dividends and/or distributions before taxes. All performance quoted represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate with market conditions so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the return figures quoted. Returns would have been lower if certain of the Fund's fees and expenses had not been waived. For the Fund's most recent month-end performance visit matthewsasias.com.

Investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors. Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

⁵ Holdings may combine more than one security from the same issuer and related depositary receipts.

⁶ Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding. Percentage values may be derived from different data sources and may not be consistent with other Fund literature.

⁷ Equity market cap of issuer. The Portfolio's market cap exposure breakdown presented is used for comparison purposes and the definition of the capitalization breakdown is from MSCI. The Fund defines Small Companies as companies with market capitalization no higher than the greater of US\$5 billion or the market capitalization of the largest company included in the Fund's primary benchmark, the MSCI China Small Cap Index.

⁸ Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.

⁹ The P/E Ratio is the share price of a stock as of the report date, divided by the forecasted earnings per share for a 12-month period (FY1) or a 24-month period (FY2). For the Fund, this is the weighted harmonic average estimated P/E ratio of all the underlying stocks in the Fund, excluding negative earners. There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.

¹⁰ A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.

¹¹ Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.

¹² Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.

¹³ Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.

¹⁴ **Mainland China listed Companies** include A Shares and B Shares. **A Shares** are Mainland Chinese companies incorporated in China and listed on the Shanghai or Shenzhen exchanges, available mostly to local Chinese investors and qualified institutional investors. **B Shares** are mainland Chinese companies listed on the Shanghai and Shenzhen stock exchanges, available to both Chinese and non-Chinese investors. **ADRs** are American Depositary Receipts and **GDRs** are Global Depositary Receipts. **Hong Kong Listed Companies** include SAR (Hong Kong) companies, China-affiliated corporations, and H Shares. SAR companies are companies that conduct business in Hong Kong and/or mainland China. China-affiliated corporations [CAC], also known as "Red Chips," are mainland China companies with partial state ownership listed in Hong Kong, and incorporated in Hong Kong. H Shares are mainland Chinese companies listed on the Hong Kong exchange but incorporated in mainland China. **Other** represents Chinese companies listed in other countries or non-China companies with a majority of revenue coming from China such as Japan, Singapore, Taiwan and the United States or other non-China companies.

Peeyush Mittal, CFA
Portfolio Manager

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Matthews India Fund

June 30, 2026

Investment Objective

Long-term capital appreciation.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in publicly traded common stocks, preferred stocks and convertible securities of companies located in India.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. In addition, single-country and sector funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic region. These and other risks associated with investing in the Fund can be found in the prospectus.

There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.

⁸ A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.

⁹ Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.

¹⁰ Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.

¹¹ Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.

INVESTMENT APPROACH

Matthews Asia believes in the long-term growth of Asia, one of the world's fastest-growing regions. Since 1991, we have focused our efforts and expertise in these countries, investing through a variety of market environments. With \$7.6 billion in assets under management as of June 30, 2026 Matthews Asia employs a bottom-up, fundamental investment philosophy with a focus on long-term investment performance.

Portfolio characteristics for the Fund may vary from time to time from what is shown. It should not be assumed that any investment in the securities listed was or will be profitable.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasias.com. Please read the prospectus carefully before investing.

Matthews Asia Dividend Fund

June 30, 2026

Investment Objective

Total return with an emphasis on providing current income.

Strategy

Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in dividend-paying equity securities of companies located in Asia. Asia consists of all countries and markets in Asia, and includes developed, emerging and frontier countries and markets in the Asian region. The Fund may also invest in convertible debt and equity securities of companies located in Asia.

Risks

All investments involve risks, including possible loss of principal. Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. There is no guarantee that the Fund or the companies in its portfolio will pay or continue to pay dividends. These and other risks associated with investing in the Fund can be found in the prospectus.

PERFORMANCE AS OF JUNE 30, 2026

	Average Annual Total Returns							
	3 Months	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception	Since Inception

GROWTH OF A HYPOTHETICAL \$10,000 INVESTMENT SINCE INCEPTION — INVESTOR

The performance data and graph do not reflect the deduction of taxes that a shareholder would pay on dividends, capital gain distributions or redemption of fund shares. Values are in US\$. Source: BNY Mellon Investment Servicing (US) Inc.

¹ The MSCI All Country Asia Pacific Index is a free float—adjusted market capitalization—weighted index of the stock markets of Australia, China, Hong Kong, India, Indonesia, Japan, Malaysia, New Zealand, Pakistan, Philippines, Singapore, South Korea, Taiwan and Thailand. Index is for comparative purposes only and it is not possible to invest directly in an index.

² Calculated from 10/31/06.

Performance assumes reinvestment of all dividends and/or distributions before taxes. All performance quoted represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate with market conditions so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the return figures quoted. Returns would have been lower if certain of the Fund's fees and expenses had not been waived. For the Fund's most recent month-end performance visit matthewsasias.com.

Investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors. Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.

Matthews Asia is the brand for Matthews International Capital Management, LLC and its direct and indirect subsidiaries. The information contained herein has been derived from sources believed to be reliable and accurate at the time of compilation, but no representation or warranty (express or implied) is made as to the accuracy or completeness of any of this information. Matthews Asia and its affiliates do not accept any liability for losses either direct or consequential caused by the use of this information. Matthews Asia Funds are distributed in Latin America by Picton S.A.

- 3 Holdings may combine more than one security from the same issuer and related depositary receipts.
- 4 Percentage values in data are rounded to the nearest tenth of one percent; the values may not sum to 100% due to rounding. Percentage values may be derived from different data sources and may not be consistent with other Fund literature.
- 5 Equity market cap of issuer.
- 6 Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share was calculated including cash held in the Fund.
- 7 The P/E Ratio is the share price of a stock as of the report date, divided by the forecasted earnings per share for a 12-month period (FY1) or a 24-month period (FY2). For the Fund, this is the weighted harmonic average estimated P/E ratio of all the underlying stocks in the Fund, excluding negative earners. There is no guarantee that the composition of the Fund will remain unchanged, or that forecasted earnings of a stock will be realized. Information provided is for illustrative purposes only.
- 8 A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flow, the effects of depreciation and other non-cash factors are removed. Similar to price/earnings ratio, this measure provides an indication of relative value.
- 9 Price-to-Book Ratio (P/B Ratio) is used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share. A lower P/B ratio could mean that the stock is undervalued.
- 10 Return on Equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested, and is calculated as net income divided by shareholder's equity.
- 11 Earnings Per Share (EPS) is the amount of annual profit (after tax and all other expenses) attributable to each share in a company. EPS is calculated by dividing profit by the average number of shares in a company. Earnings growth is not a measure of a fund's future performance.
