

Matthews Asia Innovators Fund

Investor

Commentary

Period ended March 31, 2025

Market Environment

- Asia performed better than expected in the first quarter of 2025 thanks in part to a more favorable macro environment. Many investors had expected the strength in the dollar and U.S. equity market to continue into 2025 and contribute to a weaker performance in the region but that didn't happen.
- At the country level, performance was mixed. China led markets in Asia higher while Taiwan and India faced pressure. China technology shares were buoyed by the success of the DeepSeek artificial intelligence (AI) platform which in turn spurred a selloff in U.S. big tech stocks and negatively impacted Taiwan, a market that is almost a direct play in a narrow area of technology driven by AI.
- India's market was challenged as earnings disappointed amid softening economic growth caused by weaker government spending and tight monetary policy. South Korea posted a respectable gain as valuations declined and opportunities emerged unrelated to the global cycle.
- In more peripheral markets, Southeast Asia should have benefited from a weakening U.S. dollar but was hurt by political disruption. As the quarter progressed, optimism toward the region receded as U.S. economic data deteriorated and concerns gathered over the prospect of new far-ranging reciprocal U.S. tariffs and a trade-related global economic slowdown.

Contributors and Detractors

- For the quarter ended March 31, 2025, the Matthews Asia Innovators Fund returned 1.93%, (Investor Class) and 1.98% (Institutional Class) while its benchmark, the MSCI All Country Asia ex Japan Index, returned 1.89% over the same period.
- On a country basis, the top three contributors to relative performance were Singapore and China/Hong Kong due to stock selection and Thailand due to zero allocation. The top three detractors were India due to stock selection, Vietnam due to an off-benchmark allocation and South Korea due to an underweight allocation.
- On a sector basis, the top three contributors to relative performance were communication services due to an overweight allocation and stock selection, health care and real estate due to stock selection. The top three detractors were industrials, consumer discretionary and information technology (IT) due to stock selection.
- The largest contributors to absolute performance included Alibaba Group, the largest e-commerce platform company in China, Sea, a Singapore-based provider of PC and mobile digital content, and Tencent Holdings, a Chinese online gaming and social media conglomerate. The top three detractors included Taiwan Semiconductor Manufacturing Co. (TSMC), a globally leading chipmaker, Eternal Ltd., operator of Zomato, a leading Indian online restaurant booking and food delivery company, and Computer Age Management Services, an Indian mutual fund transfer agency.

Outlook

- Front and center to our outlook is the impact of U.S. tariffs on the global economy and markets. The Trump administration's tariff policy has shown itself to be fluid and unpredictable. We may see some new tariffs rolled back in certain markets and a different picture coming into focus in the coming weeks and months.
- At this point, what we can conclude is that from a U.S. perspective, the administration's tariff policy is growth negative and inflation positive. It probably means that inflation stays around 3% and that has implications for the Federal Reserve's interest rate policy and in turn for markets in the region.
- When the global economy is under pressure, we believe domestic drivers are more important than global drivers. For Asia, that means we need to be cautious of markets that are correlated to the U.S. and of companies that are selling into the US. Domestic demand-driven markets like India and China, which rely less on the global economy, we think will be more resilient.
- Many investors are expecting the Federal Reserve to maintain a rate-cutting trajectory this year which would be a tailwind for Asia with the exception of Japan where monetary policy is tightening. We believe markets will also be supported by a pick-up in earnings on valuations that are still cheap. We think there are opportunities for experienced active managers to pick their spots and focus on fundamentals.

Investments in Asian securities may involve risks such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. Investing in emerging and frontier markets involves different and greater risks, as these countries are substantially smaller, less liquid and more volatile than securities markets in more developed markets. Sector funds may be subject to a higher degree of market risk than diversified funds because of a concentration in a specific sector. The Fund's value may be affected by changes in the science and technology-related industries.

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A [prospectus](#) or [summary prospectus](#) with this and other information about the Funds may be obtained by visiting matthewsasiasia.com. Please read the prospectus carefully before investing.

Investments involve risks, including possible loss of principal. Investments in international, emerging and frontier markets involve risks such as economic, social and political instability, market illiquidity, currency fluctuations, high levels of volatility, and limited regulation, which may adversely affect the value of the Fund's assets. Additionally, investing in emerging and frontier securities involves greater risks than investing in securities of developed markets, as issuers in these countries generally disclose less financial and other information publicly or restrict access to certain information from review by non-domestic authorities. Emerging and frontier markets tend to have less stringent and less uniform accounting, auditing and financial reporting standards, limited regulatory or governmental oversight, and limited investor protection or rights to take action against issuers, resulting in potential material risks to investors.

Investing in small- and mid-size companies is more risky than investing in larger companies as they may be more volatile and less liquid than large companies. In addition, single-country funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Pandemics and other public health emergencies can result in market volatility and disruption.
